IM Syllabus (2020): Home Economics and Human Ecology

IM SYLLABUS (2020)

HOME ECONOMICS AND HUMAN ECOLOGY IM 18

SYLLABUS

Home Economics and Human Ecology IM 18	(Available in September)
Syllabus	1 Paper (3 hours)

The broad and multidisciplinary nature of Home Economics and Human Ecology enables candidates to demonstrate their abilities to transfer knowledge, understanding and skills for further studies in fields such as higher education, health sciences, communications/media, agriculture, and the hotel, leisure and food industries.

The IM course is designed to provide a brief review of fundamental nutrition, health, family and consumer aspects of the Home Economics SEC level and to extend this to include more advanced concepts, which are also dealt with in a broader manner. Most of these concepts are included to provide a general and coherent view of the subject and will not be treated with the same rigour and at the same depth as in the Advanced level course in Home Economics and Human Ecology.

The course is divided into three areas: The Family in Society, Food Science and Nutrition, and Consumer Issues and Concerns. Although the content is written as separate areas it is to be noted that examination questions will reflect the interlinking between the areas in accordance with the holistic nature in the teaching of Home Economics and Human Ecology.

1. AIMS

The course aims to:

- Increase the students' understanding of the complex factors that influence people's lifestyles, eating practices and choice of goods and services;
- Develop the students' ability to think and reason, make informed decisions and choices, and develop skills for the effective organisation and management of resources;
- Encourage students to respond effectively to rapid technological changes and the growth of scientific understanding;
- Enable students to acquire transferable skills that could be used for various situations experienced throughout the lifecycle;
- Broaden the students' fields of knowledge and encourage them to critically appreciate the inter-relationships of the three content areas.

2. ASSESSMENT OBJECTIVES

Candidates will be assessed for demonstrating:

- The knowledge, understanding and application of specific information, principles and concepts relevant to Home Economics and Human Ecology;
- The ability to analyse given information, present ideas, descriptions and arguments, clearly and logically in order to reach justified decisions and conclusions;
- An awareness and understanding of contemporary issues and developments and to recognise their implications for individuals, families and the environment;
- The ability to recommend strategies for effectively managing inevitable situations throughout a person's lifecycle;
- The use of correct terminology, language and grammar to convey information, principles and concepts, effectively, appropriately and coherently.

3. SCHEME OF ASSESSMENT

The examination will consist of one three hour written paper of 100 marks divided into two sections. Candidates are required to answer all the questions in Section A which is made up of one word- or short-answer type questions for a total of 40 marks. In Section B candidates are required to answer three questions from a choice of four, with 20 marks allocated for each question. The questions in Section B will be structured essay-type questions drawing on the knowledge, understanding, application and evaluation of principles and concepts from all areas of the syllabus in accordance with the holistic nature of the subject.

Candidates will qualify for a pass if they obtain grade A, B, C, D, or E. Candidates who do not qualify for a pass will be unclassified.

4. GRADE DESCRIPTORS

The following grade descriptors indicate the level of attainment characteristic of the given grade at Intermediate Matriculation level. They give a general indication of the required learning outcomes at each specific grade. The descriptors should be interpreted in relation to the content outlined in the syllabus; they are not designed to define the content.

Grade A

Candidates demonstrate a very well developed ability to:

- Analyse, interpret and evaluate social, scientific and technological concepts together with current, relevant local trends, regulations and developments and clearly demonstrate the interrelationship of subject matter;
- Apply knowledge and understanding to a range of situations within a theoretical and practical context;
- Formulate coherent and logical opinions based on sound evidence;
- Use technical terms accurately and confidently, in a concise, logical and relevant manner.

Grade C

Candidates demonstrate a satisfactory ability to:

- Analyse, interpret and evaluate social, scientific and technological concepts with basic evidence of the interrelationship of subject matter;
- Apply knowledge, with reasonable understanding, to different theoretical and practical situations;
- Explain and evaluate concepts and situations with satisfactory evidence of the knowledge of the underlying principles;
- Use technical and general terminology appropriately.

Grade E

Candidates demonstrate a limited ability to:

- Analyse, interpret and evaluate social, scientific and technological concepts with restricted evidence of relevant local situations;
- Apply knowledge and understanding to different situations;
- Understand the underlying principles in order to explain and evaluate concepts and situations and use examples or points to illustrate arguments;
- Use technical terms appropriately.

5. CONTENT

The Family in Society

This area focuses on changing family structures, the factors affecting them, and the support services provided by local agencies. It also covers the identification of the developmental needs of different family members throughout the life cycle.

<u>Concept</u>	Expected Knowledge	<u>Amplification</u>
Family units and households	The changing nature of families and lifestyles	 The concept of a family unit Changes in the family unit structure (smaller families, one-parent families, same-sex parent families, mixed race/religion families, single parent households, young people moving away from home) and their implications for family lifestyle
Wellbeing of individual family members	The optimum physical, social, emotional and intellectual development of children between 0 and 4 years	 Key developmental stages with a focus on physical, social, emotional and intellectual development Providing a variety of experiences to develop physical, social, emotional and intellectual development The importance of play in a stimulating environment
	Responsibilities and rights of adults	 Responsibilities towards children, partners and elderly parents Sharing family-related responsibilities within and outside the home (the playground and while travelling in cars) Flexi-time, tele-working, job-sharing and reduced hours Families coping with different situations (working parents [dual career], short-term illness, chronic illness, disability, shared accommodation with elderly relatives or between friends, unemployment)
	Wellbeing of the elderly Active ageing within the community - physical, social, emotional and intellectual development of the elderly Retirement from	 The concept of active ageing and its benefits for the individual, family members, the local community and the country. Suggestions of how the elderly can remain active within these spheres The role of grandparents in enhancing young families' and children's quality of life Financial planning in preparation for
	work	retirement
	 Support services 	Support services for children provided by

provided by	Aġenzija Appoġġ (to describe a maximum
Aģenzija Appoģģ	of 3 services)

Food Science and Nutrition

This area deals with factors affecting food choices, the relationship between diet and health, the scientific principles in the production, processing and preservation of foods. Through research and practical activities students will gain insight into current technological changes.

Nutrition

<u>Concept</u>	Expected Knowledge	<u>Amplification</u>
The nutrients	The nutrients	Functions of nutrients related to health and the main dietary and non-dietary sources
Protein	 The chemical composition of proteins Types of proteins Essential/ indispensable and nonessential/ dispensable amino acids The biological value of protein foods The complementary effect of plant proteins 	 Chemical elements comprising proteins Some examples of proteins in the body Three examples of essential/ indispensable and non-essential/ dispensable amino acids The need for adequate daily intake of essential/ indispensable amino acids Examples of foods of high and low biological value Identify plant sources of protein foods as an alternative to high biological value protein foods (textured vegetable protein, tofu, tempeh, soya milk, quinoa) Examples of the complementary
Carbohydrates	The chemical composition of carbohydrates Classification and food sources of the main groups of carbohydrates: sugars, starches and fibre/non-starch polysaccharides (NSP) The relationship between monosaccharides, disaccharides and polysaccharides The function of	 effect of plant protein foods Chemical elements comprising carbohydrates Food sources of different carbohydrates Explaining the formation of disaccharides and polysaccharides from monosaccharides Monosaccharides as end products of digestion The contribution of each type of

	carbohydrates	carbohydrato to boalth
	carbohydrates	 carbohydrate to health Carbohydrates as the optimal source of energy Impact of over-consumption of different types of carbohydrates The effects of insoluble fibre/NSP on the digestive tract The health implication of diets low in insoluble fibre/NSP The health benefits of soluble fibre
Lipids	 The chemical elements and the basic structure of a triglyceride Classification of lipids Types of fatty acids Hydrogenated and trans fats The main sources of dietary fats The function of lipids in the diet (including cholesterol, and omega fatty acids) 	 Chemical elements and structure (triglycerides as being composed of glycerol plus 3 fatty acids) Identify triglycerides, phospholipids and sterols The basic description of a saturated and unsaturated fatty acid (monounsaturated and polyunsaturated) Basic description of hydrogenated fats Relationship of trans fatty acid to health Food sources of the different lipids Functions of the different lipids - triglycerides, cholesterol and phospholipids Lipids as a concentrated source of energy; potential role in obesity, heart health and cancer The functions of cholesterol; the role of cholesterol in relation to heart health (the function of HDL- and LDL-cholesterol) The benefits of omega-3 and omega-6 fatty acids with respect to heart disease risk prevention
	The modification of fat intake in accordance with the dietary guidelines	Methods of modifying the use and intake of dietary lipids to reduce the risk of dietary related disorders and diseases
Vitamins	 Definition, scientific names, classification and properties of vitamins 	 Fat-soluble: A - beta-carotene, retinol; D - cholecalciferol; E - tocopherol; K - phylloquinone Water-soluble: B₁ - thiamin; B₂ - riboflavin; B₃ - niacin; B₆ - pyridoxine; B₉ - folic acid/folate; B₁₂ - cobalamin; C - ascorbic acid Properties of fat-soluble and water-soluble vitamins Common sources of the different vitamins Main functions of the different vitamins

	The need of folic acid	Justification for higher recommended
	during pregnancy according to the European Food Safety Authority (EFSA)	intake of folic acid during pregnancy.
	 The effect of insufficient and excessive intakes of vitamins Vitamin supplements 	 The effects of low vitamin C and vitamin D intake on health The importance of taking dietary sources of vitamins The role of vitamin supplements and ensuring a safe intake
	 Changes that occur during the preparation, cooking and serving of foods rich in vitamins 	 External conditions (storage, preparation and processing of foods) affecting vitamin stability and the methods used to ensure maximum retention and availability of fat-soluble and water-soluble vitamins
Minerals	 Functions and main food sources of key minerals including trace elements 	The functions and common food sources of calcium, potassium, phosphorus, sodium, iron, iodine and fluoride
	 Justifications for higher intake of specific minerals for particular population groups according to 	 Justification for higher recommended intakes of calcium and iron during various lifecycle stages with reference to EFSA recommendations Factors that hinder the absorption of
	EFSAThe effects of and prevention of insufficient intake of	 minerals Individuals who require higher and lower intakes of sodium The effects of low dietary intakes of iron
	certain minerals	and calcium in the body and strategies to improve their absorption
Water and fluids	Role of water in the body	Basic functions of water in the body Balancing fluid intake with losses from the body
	The importance of an adequate fluid intake	 Recommended daily fluid intake for adults (1.5 to 2 litres) (Refer to <i>Dietary Guidelines for Maltese Adults</i>, 2016) Population groups who require a higher fluid intake
	 Signs of dehydration 	Symptoms and effects of dehydration
Energy value of foods	The energy value of foods	 Foods which are high in calories (foods rich in fats, low in water content) Foods which are low in calories Value of fruits and vegetables as foods with a high water content

Food Habits and Needs

Concept	Expected Knowledge	<u>Amplification</u>
Factors affecting	Physiological,	Understanding of differences in the
food choices and	psychological,	relative importance and impact of
eating patterns	cultural, social,	physiological, psychological, cultural,
	economic and	social, economic and technological factors
	technological, factors	in the food choices of different groups
	affecting food	and individuals
	choices	The value of traditional Maltese dishes in
		promoting identity, sustainability and
		health
	 Availability, 	Causes and implications of changing
	accessibility,	dietary patterns (food availability,
	retailing methods,	accessibility, retailing methods,
	market and global	marketing and sustainable consumption)
	influences	
	Personal preferences	Personal food preferences and influence
	and peer groups	of peer groups in different settings
The Healthy Plate	Dietary guidelines for	Definition and function of dietary
,	the Maltese nation	guidelines
		• 'The Healthy Plate': dietary guidelines for
		Maltese adults
		The daily number of servings for cereals,
		vegetables, fruit and dairy products
Energy needs of	Energy balance and	Meaning of energy input and output
individuals	imbalance and the	Effects of imbalance: Overweight and
	effects on health	obesity, muscle wasting and their
		implications for health
	Factors which	BMI ranges and BMI as an indicator of
	influence energy	increased risk for health problems
	intakes	Changing energy needs throughout the
		lifecycle, focusing on level of activity, rate
		of growth, age, body size and gender
	Healthy weight	Healthy weight management practices:
	management	choice of a balanced diet and physical
		activity
The relationship	Common meal	Prevalence of snacking and skipping
between diet and	patterns, changing	breakfast; the consistent use of
health	dietary practices and	convenience foods, take-out food and
	the effects on health	food consumption outside the home;
		awareness of health-related advantages
		and disadvantages of organic farming and
		GMOs; fad diets and eating disorders
		(anorexia and bulimia nervosa) and how
		to make wise food choices to ensure
		healthy eating
	 Diet-related 	The role of diet in the development and
	disorders and	prevention of obesity, diabetes, coronary
	diseases prevalent in	heart disease, hypertension, dental

Malta	caries, diverticulosis, osteoporosis,
	constipation, anaemia, colorectal cancer,
	eating disorders
	Food intolerances and food allergies:
	lactose intolerance and peanut allergy
	Autoimmune disorders: Coeliac disease
	and Type 1 Diabetes
 Vegetarian diets and 	• Types of vegetarian diets: lacto, lacto-
health	ovo, pesco, vegans
	• The health benefits of vegetarian/ plant-
	based diets

Food Science

<u>Concept</u>	Expected Knowledge	<u>Amplification</u>
Food spoilage	• The main types of	Common examples of microbial
	food spoilage	(fermentation), biological (over ripening)
		and chemical (oxidation) food spoilage
		Types of microorganisms and the
		conditions necessary for growth and multiplication
	The principles	Principles underlying the effects of the
	underlying the	use of microorganisms and enzymes in
	growth and control of microorganisms:	specific foods, such as cheeses and yoghurt
	bacteria, moulds and	yognure
	yeasts	
Food poisoning	• Food poisoning	Food source and common symptoms of
	organisms and	food poisoning (salmonella, bacillus
	susceptible foods	cereus and Escherichia coli)
	and symptoms	
	High-risk situations	 Common situations with potential for food poisoning outbreaks
	Safe and unsafe food	Basic strategies for safe food handling (at
	handling practices in	home, family outings, barbecues)
	different common	
	settings	

Consumer Issues and Concerns

This area helps students acquire knowledge of the rights and responsibilities of consumers together with the ability to assess and deal with various situations. Consumers need to be environmentally conscious and effective managers of resources.

<u>Concept</u>	Expected Knowledge	<u>Amplification</u>
Consumer	Factors which	Personal influences: knowledge, ability,
behaviour	influence consumer buying behaviour	likes and dislikes, emotional factors, values
		Social influences: gender, family roles,
		social status, cultural trends

		 Economic influences: income, price, interest charged for hire purchase, saving and borrowing patterns Environment related influences: considerations of impact on the
		environment of purchasing decisions (food, clothing, personal hygiene, transport) • Marketing and retailing influences: promotional strategies and advertising
Consumer information	 Sources and use of different forms of consumer information The labelling of goods 	 Sources of information about goods and services and their advantages and disadvantages (online, printed material, billboards, family members, friends and sales personnel) Identification and function of: labels on textile goods and detergents (phosphate free) and toiletries (not tested on animals) environmentally friendly labels (recycling labels, Green Dot, EU energy label, EU eco-label), The Forest Stewardship Council (FSC) and The
Consumor rights	• Local regulations	Energy Starcompliance label - CE markKnowledge of consumer rights and
Consumer rights and responsibilities	Local regulations concerning the purchase and use of goods and services	responsibilities Legal and Commercial guarantees Methods of redress when problems arise (with retailer or service provider in person, over the phone, or via letter or email; through the Malta Consumer and Competition Affairs Authority [MCCAA]); and Consumer Associations
	 Local institutions and associations that safeguard consumers rights 	The function of the Consumer Claims Tribunal, Consumer Association, and European Consumer Centre (ECC)
Shopping venues, purchasing methods and methods of payment	Traditional and modern ways of purchasing goods	 Advantages and disadvantages of different purchasing methods (online shopping, tele-shopping, chain stores, markets, shopping malls) Consumer rights in off-premises contracts and distance shopping (delivery period, withdrawal/cancellation period)
	Different ways of paying for goods and services	 Methods of payment and financial transactions - cash, local and international debit cards, credit cards, contactless cards, and internet banking Outline three security measures when effecting electronic transactions.

Financial	The family income	Definitions of gross income, disposable
management		income, non-wage income
		Budgeting to suit different life stages,
		population groups and challenging
		circumstances
		Causes and implications of running into
		debt and living on credit
		The importance of saving for retirement -
		private pension schemes
Sustainability	• Individual and family	Definition of sustainability
and the	practices that	Understanding the impact of consumer
conservation of	contribute towards	choices on climate change, water and
natural resources	the sustainability of	energy supply
and energy	the local and global	The role of the individual and the family to
	environment	conserve non-renewable sources of
		energy, water, soil and limestone
		The choice of goods and services which
		safeguard the natural environment,
		namely: goods and services which help
		save on energy and water, and/or are
		derived from sustainable sources (wood,
		paper, food)
		Practising the traditional 3 Rs - Reduce,
		Reuse, Recycle
	 Waste management 	Waste management services
	services and use	provided locally:
		 Door to door collection of mixed,
		organic, recyclable waste
		 Collection of textiles
		Bring-in sites
		Civic Amenity sites
		Bulky refuse collection
		Definition and purpose of engineered
		landfill
		 The impact of engineered landfills on the
		environment, nation's health and economy
